Potential divider notes

Supply: Vin = 12 V, tolerance ± 5%

- R1 = 4.7 kΩ
- R2 = 10 kΩ
- Vout = Vin × R2 / (R1 + R2)
- Vout = 12 × 10 / 14.7 = 8.16 V

A load current of 2.2 mA through 160 Ω shifts the output by −0.35 V.

Phase shift at 1.5 kHz: 45° (π/4 rad).
